GM2779 Argon/Pony Bottle Mount

Product description

The argon/pony bottle mount is used to attach a pony bottle or argon bottle to your back plate harness. The retention straps that go around the bottle mount to your back plate's pre-drilled holes using stainless hardware, such as the HW1069 Assembly Screw. The loop goes around the valve on the argon/pony bottle keeping it from sliding out of the retention straps. It is designed for use with a 6 cubic foot bottle but can be adjusted as needed if you are using a larger bottle.

Attaching the argon/pony bottle mount

1. Align the retention straps' stainless grommet holes with the holes on your back plate. Place one grommet hole on the front of your back plate and one grommet hole on the back of your back plate.
2. Attach the argon/pony mount using stainless hardware (HW1069 provided).

Attaching an argon/pony bottle

1. With the valve facing down, slide the argon/pony bottle into the retention straps.
2. Slip the extended loop over the bottle's valve.
3. Adjust the extended loop so that the bottle is in the desired position.
4. Tighten the retention straps around the bottle until they are snug.
